Sending Destination via Bluetooth

To send the point selected by NaviCon to the car navigation system via Bluetooth, you need to set up pairing between your smartphone and the car navigation system.
Pairing determines the combination of connected devices (Pair).
The following pages introduce specific procedures.

*The screen details and design may differ from the actual product.

There is a type of Bluetooth connection called a "Profile" which requires pairing for each purpose.
Typical ones are for telephones (HFP) and for music playback (A2DP), but for NaviBridge to send a destination, you need to pair for data communication (SPP)
Some car navigation systems perform multiple pairing at the same time.

Once pairing is complete, the connection is automatically made the next time.
When NaviBridge is connected to the car navigation system, the indicator at the bottom right of the map screen changes to green "ONLINE".

*In some rare cases, pairing information may be lost depending on the usage situation. In this case, delete the entry from both your smartphone and car navigation and try pairing again.
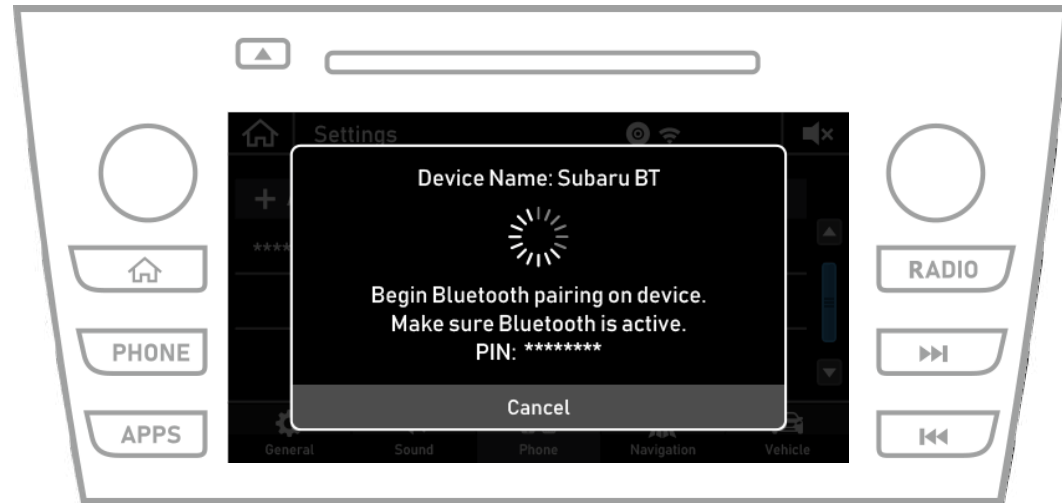

Smartphone
Car navigation
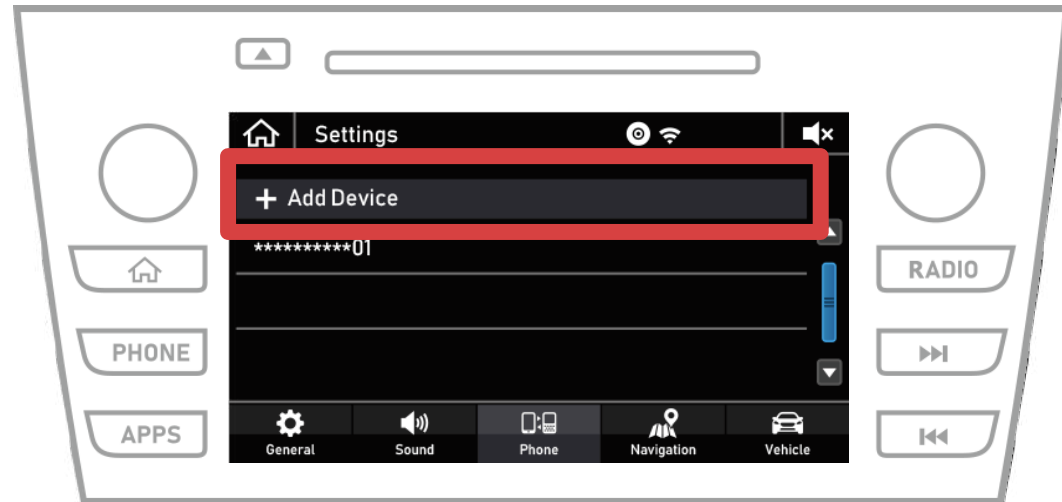

Select " 🏠 " → "Settings" → "Phone" → "Add Device".
Smartphone	Car navigation

When this screen is displayed, register for Bluetooth from your smartphone.
Smartphone	Car navigation

From the Android home screen, tap "Settings" → "Bluetooth" to display the Bluetooth settings screen.

Smartphone

Car navigation

Device Name: Subaru BT

Begin Bluetooth pairing on device.
Make sure Bluetooth is active.
PIN: ********
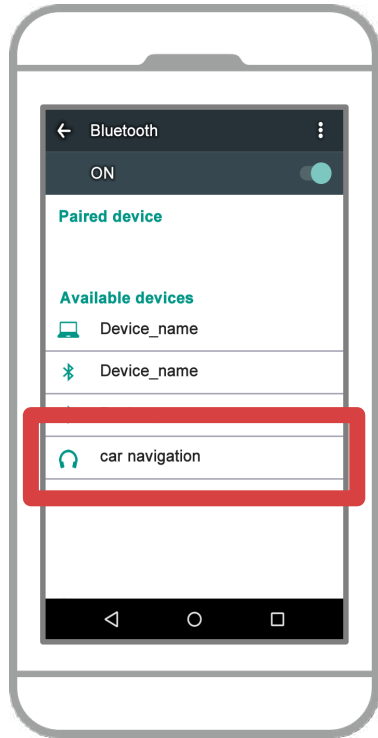

Cancel

If Bluetooth is off, turn it on.

If the car navigation name is not displayed, select "Update" from the menu at the top right of the screen.
Smartphone

Car navigation

Device Name: Subaru BT

Begin Bluetooth pairing on device.
Make sure Bluetooth is active.
PIN: ********

Cancel

Select the device name (Car Navigation in this case).

* The device name differs depending on the car navigation system, so please check the instruction manual.
Smartphone

# Car navigation

Select "Confirm".

A Bluetooth pairing request will be displayed, so click "Pair".

# Smartphone

Car navigation

This completes the pairing of the smartphone and car navigation system.

After that, select the car navigation on NaviBridge.
Smartphone	Car navigation

Start NaviBridge. The car navigation system you paired will be displayed. Select it and press "Done".

If this screen does not appear automatically when you start NaviBridge, follow the steps below.
Smartphone

Car navigation

Start NaviBridge and select "Settings" from the menu on the upper left.

| Smartphone	Car navigation

Press "Select Navigation Unit" at the bottom of the settings screen.

The same screen as page 9 will be displayed, so select the car navigation system.

Smartphone	Car navigation

When the status display at the bottom right of the NaviBridge map screen turns ONLINE, the connection between NaviBridge and the car navigation system is complete.

If you are having trouble connecting to the car navigation system ...

OFFLINE ?

- I tried pairing in the above procedure, but I couldn't connect.

- After upgrading NaviBridge, I can no longer connect.

- After updating smartphone OS, I can no longer connect.

- After changing smartphone to new one, I can no longer connect.

- When I connected the USB cable, NaviBridge turned OFFLINE.

- I don't know why, but suddenly I can't connect.

If you are having trouble connecting, we provide Q & A.

Please look at this.
